Secure Audit Conducts Compliance Audits

The power of mobile communications is all around us, so it made sense for Appriss Retail to put our audit technology into the hands of your team. Download our app and audit from the scene on your mobile phone (iOS or Android) or other device of choice. Secure Audit makes your mobile a storehouse for safe and secure data and information. It has never been so easy to be efficient, organized, and productive.

When data service and Wi-Fi are not available, you can use the app offline. It will sync when your service connects.

Identify Operational Issues

Secure Audit simplifies audits. You can easily create your own audits, questions, and scoring. Make and save as many audits as required within your organization, across departments, business units, and brands.

A robust auditing program can be key in identifying issues and areas needing improvement. Secure Audit provides a flexible foundation. With all your data centralized in one place, audits can be accessed by a click by any authorized user.

Compliance Reporting

KPI (key performance indicator) data can be imported from many sources and combined with Secure Audit data to build insightful reports using the ad hoc reporting tool. Reports, dashboards, heat maps, and benchmarking provide a powerful, easy to use, self-service tool, that gives you immediate visibility to areas that need improvement and allow you to make informed decisions. Automatic emailing to store, district, and regional managers makes sharing the information easy.

APPRISS® RETAIL

Advantages

Loss Prevention

- Easily conduct audits on-the-go
- Spend less time preparing, taking, and completing audits
- Create an unlimited number of audits
- Real-time and historical analysis
- Built-in system reports and ad hoc reporting

- Compatible with Android and Apple products alike
- Ad hoc reporting tool reduces the need for custom reports from IT
- Supports single sign-on credentialing
- World-class technical support

Financial

- Increase sales
- Increase productivity
- Reduce employee turnover

How Secure Audit Works

It reduces audit overhead by 25 percent by making the process easy and accurate. The solution offers full functionality on any device, so that the end user can choose the most convenient tool. In the following example, the auditor uses a laptop and mobile phone combination.

1. On her office laptop, the auditor uses Secure Audit to create an audit for a new format of store.
2. Onsite the audit manager uses the Secure Audit mobile app on her phone to select and complete the audit form. It has the same functionality as if she used a tablet or computer.
3. She takes several photos, records a short video, and quickly attaches them to the audit.
4. In the back corner of the warehouse, she does not get cell phone or Wi-Fi reception, but she continues to use the app. Later, when she is in range, the app synchronizes the data.
5. When she has completed the audit, she uses Secure Audit to create her final report, complete with easy-to-understand findings and action plans. The system automatically emails the report to the appropriate personnel.
6. The system automatically issues follow-up alerts to the store manager who updates his action plans as actions are completed.

Audits That Get Results

What good is an audit with sketchy information or a confusing action plan? The simple user interface and sophisticated inner workings of Secure Audit makes it easy to collect and use robust information. Using the results of the current audit and historic information, you can create clear action plans and present them in an attractive, easy-to-understand format. You can also create automated reminders, so the changes are implemented and results are seen according to plan.

Track Manager Performance

Some managers have the Midas touch, and others simply do not. Secure Audit tracks manager performance as they move store to store. With it, district and regional managers can recognize the top performers and identify those in need of coaching. At the store level, managers can update their action plans in real-time, even conducting self-audits and surveys. When managers are in top form, morale improves and turnover drops.
